

A scatter plot on a white background with a black border. It contains approximately 30 orange circular data points. The points are distributed across the plot area, with a significant concentration forming a dense, roughly circular cluster in the center-right region. Several points are scattered outside this central cluster, including one at the top center, one at the bottom center, and a few near the corners. The circles vary in size, with the largest ones located within the central cluster, suggesting a third variable might be represented by their size.
